Description

The SelfServer is an All-in-One solution for libraries, and is used for check-in and check-out library items. The sturdy and timeless design will make it fit into your architect's design without disturbing the library experience. The SelfServer is a compact 'one size fits all' solution and is developed to even fit the smallest budgets.

The SelfServer is a first step for libraries to modernize item handling. We understand it can be a challenge for smaller libraries to seamlessly integrate advanced RFID technology into their existing furniture. For those libraries we developed the easy to install SelfServer. The SelfServer can be placed on any flat surface and just needs a minor software installation to be set up. Thanks to the Nedap Plug&Play principle, no advanced adjustments or modifications are needed.

Features

The SelfServer can be used in a variety of ways, for example as a self service station, a conversion station or a staff station.

Your benefits

- All-in-One solution
- Small and budget-proof
- Heavy duty design, made to be used.
- Desktop kiosk
- Timeless design
- Simple implementation
- No mounting/breaking furniture
- Quickly installed

Specification
